

# How to Play

## PLACE A BET ON YOUR ASTRONAUTS

During the TAKEOFF COUNTDOWN to the NEXT LAUNCH, place your bets on the crew by pressing the PLACE BET button next to each of the 3 astronauts. Adjust your bet by using the keyboard input or the ◀ and ▶ buttons.

## 3... 2... 1... BLAST OFF!

The Rocket will take off at launch time and follow a trajectory through space while the win multiplier grows. The objective is to have your astronauts eject before the rocket explodes! The higher the rocket flies, the larger the multiplier!

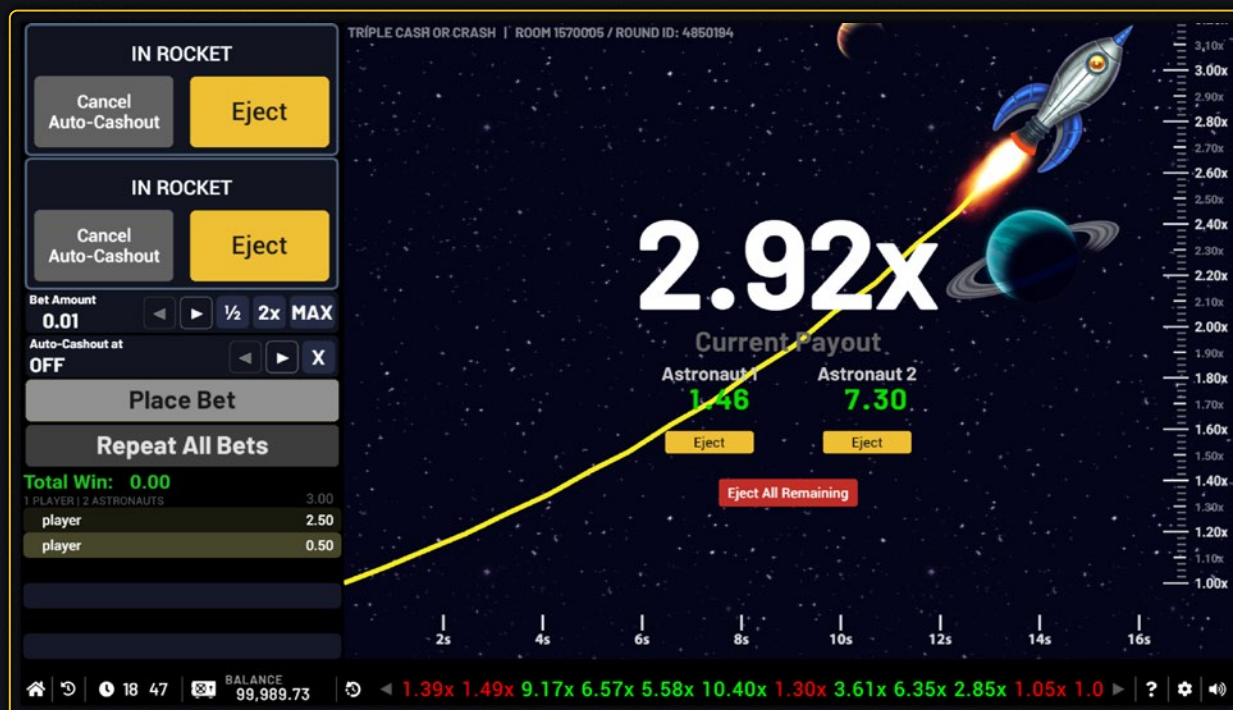

## EJECT!

Press the EJECT button next to each of the astronauts to eject them before the rocket explodes to claim your win! How high will your multiplier climb? You can also set the game to automatically eject your astronauts when a certain multiplier is reached.

---

The Return To Player (RTP) is 96.00%

## WIN LIMITS

There are several limits to the amount you can win in a single round:

Max Player Profit	Total Max Round Profit	Max Multiplier
200,000 €* <small>1 PLAYER 12 ASTRONAUTS</small>	200,000 €* <small>1 PLAYER 12 ASTRONAUTS</small>	100,000x* <small>1 PLAYER 12 ASTRONAUTS</small>

Max Player Profit is the total maximum profit one player can win across all 3 bets in a round. Total Max Round Profit is the maximum that will be paid out for all the players in a room for a single round. Max Multiplier is the highest the multiplier will go, so long as it does not conflict with the previous 2 parameters.

The game will automatically cash you out if you reach any of the limits listed above and had auto-eject set above the reached limitation. In the event of an auto-eject or manual eject occurring simultaneously as the rocket explodes, the player will lose their bet.

\* These are the default game settings. Check the payable in-game for exact limits.

# IN-FLIGHT CONTROLS

Shows the multipliers from the previous rounds in a scrolling ticker. Navigate with the ◀ and ▶ buttons

Shows the elapsed time for the current round

Shows the multiplier for the current round

Total Win: 25.00		
2 PLAYERS   2 ASTRONAUTS		
50.12		
5.20x	34.74	
2.12x	15.38	

Shows all bets from all players and their winnings for the round

Eject

Ejects your bet from the current rocket and collects the payout based on your bet amount and the current multiplier

Eject All Remaining

Ejects all currently active bets and collects the payouts for each one based on bet amount and current multiplier

Cancel Auto-Cashout

Disables the previously set auto-cashout for the selected bet

# CONTROL MAP

Bet Amount  
0.25

Sets the amount to be wagered for the next round. Your payout will be your wager multiplied by the indicated multiplier value if you eject at that time

Increases or decreases the bet amount

1/2 2x MAX

1/2: Reduces your current bet to half its current value  
2x: Increases your current bet to twice its current value  
Max: Increases your current bet to the maximum allowed value

Auto-Cashout at  
3.00

Sets your wager to automatically cash-out once the specified multiplier is reached

Increases or decreases the multiplier value for auto-cashout

X

Disables auto-cashout

Place Bet

Places the currently configured bet for the next launch

Edit Bet

Removes your bet so that the parameters can be changed

Repeat All Bets

Repeats all bets placed during the previous round, including auto-cashout settings

## CONTROL MAP

	Returns to the casino lobby
	Displays the record of play for the game
	Opens the game's Help page
	Turns all sounds off or on
	Opens the Settings Panel. Note: Gameplay continues in background

Note: The game requires a stable connection to the server. Server lag can affect the outcome. This may cause you to not eject in time. If the connection to the server is too slow, the rocket will flash red to warn players of this problem.

Misuse/Malfunction voids all pays and plays.
